

## Request of "X" type EIC codes to identify energy market participants

Structure of the EIC code:

3 9 X 1 2 3 4 5 6 7 8 9 0 A B C

where the content of each character position is:

- 1-2 (in the example above: '39'): content fixed, meaning the numerical identifier recorded by the ENTSO-E for the FGSZ as a Local Issuing Office (LIO). The term "content fixed" means that it is provided by the LIO when fulfilling the code request.
- 3 (in the example above: 'X'): mandatory used to identify an energy market participant. The term "mandatory" means that when requesting a code, the energy market participant can only select this from the drop-down list on the data sheet.
- 4-15 (above example: '1234567890AB'): optional, the content is provided by the energy market participant in the EIC code request submitted to the LIO, using the characters accepted in the code system. Accepted characters: uppercase, number, hyphen (-)
- 16 ('C' in the example above): check character, automatically recorded by the code generation system.

The energy market participant can record the EIC code requirement on the interface available at the following link:

<https://tsodata.fgsz.hu/#eiccoderequest>

In addition to recording the data on the above interface, the following documents must also be uploaded:

- A copy of a company statement not older than 30 days (in Hungarian or English).
- Specimen signatures of the persons entitled to sign for the company and the power of attorney of the person registering the code (if different from the person entitled to sign the company).
